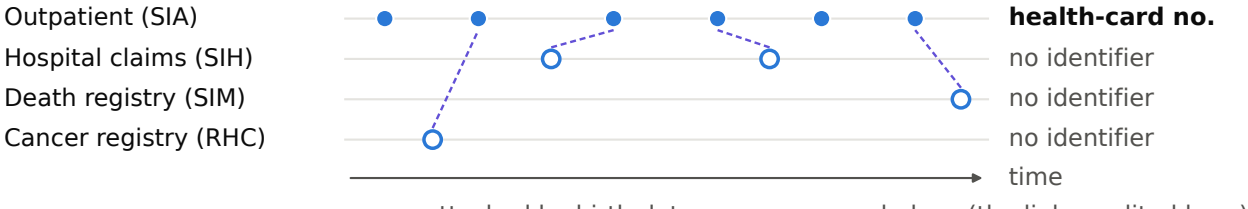
(a) One patient, four national systems, one identifier



(b) What we did

1 Measure Q1

Hide the health-card number, re-link, and score against it

E1–E2 · recall, precision

→

2 Locate Q2

Who loses links? Recall by race and completeness, adjusted

E3 · FNR gap

→

3 Propagate Q3

Feed the measured errors into survival and a trained model

E4–E5 · survival, HR
